

1) Session Scope

- What was requested
 - Improve `/signage` product discovery with an `All Products` view, product search, keyword/synonym matching, empty-state CTA, and mobile/desktop-safe UX.
 - Preserve business category ordering while sorting products A-Z inside each category and in all-products/search displays.
 - Add a mobile-only floating search FAB + bottom-sheet search UX, then restore the original top mobile search bar so both entry points coexist.
 - Verify build/lint and provide operational guidance (including local URL troubleshooting).
- What was explicitly out of scope
 - No full-site redesign.
 - No product URL/slug changes.
 - No SEO metadata/schema rewrites unless required.
 - No quote-form behavior changes.
 - No product removals.
 - No direct Vercel deploy.
 - No automatic commit/push.

2) Changes Made

- `components/signage/SignageHubClient.jsx`
 - Added `ALL\_PRODUCTS\_SLUG` pseudo-category support and all-products flattening.
 - Added searchable filtering for product name, category name, description, and keyword/tag fields.
 - Added mobile category chips and retained desktop sidebar behavior.
 - Added mobile floating glass FAB (`aria-label="Search products"`) with expand-to-pill animation and bottom-sheet dialog.
 - Added bottom-sheet search with autofocus, overlay, close button, Escape handling, result list with relevance-first then A-Z sorting, result click scroll-to-card, and transient card highlight.
 - Restored top mobile search bar (previously hidden on mobile) so top search + floating helper coexist.
 - Increased FAB icon size to `28px`, switched icon tone to warm cream (`#FAF8F4`), and moved FAB to `bottom-24 right-4` to reduce CTA overlap risk.
 - Unified top search matching to the same normalized text helper used by mobile sheet search (`getSearchableText`).
 - Constraints followed: no product slug/name/description/image/quote-link schema mutation; no data duplication.
- `app/signage/page.js`
 - Category order set/kept to business order:
 - `banners`, `yard-real-estate-signs`, `vehicle-graphics`, `vinyl-decals-window-graphics`, `business-storefront-signs`, `rigid-signs`, `a-frame-event-displays`, `print-marketing-materials`.
 - Stable category sort fallback via original index tie-break.
 - Constraints followed: metadata fields left intact.
- `lib/signage-data.js`
 - Added `searchKeywords` arrays across signage products to support synonym/intent matching.
 - Constraints followed: product identity fields unchanged.
- `components/signage/SignageCategoryClient.jsx`
 - Added stable, case-insensitive A-Z product sorting in category grids.
 - Constraints followed: category and quote-link semantics retained.

3) Routes / URLs Affected

- Touched
 - `/signage`
 - `/signage?category=<slug>`
 - `/quote-request?product=...&category=...` link generation from signage cards (target routes unchanged).
- Explicitly not touched

- ``app/signage/[category]/page.js`` in final pass.
- ``/quote-request`` page/form implementation.
- ``/api/quote``, ``/api/contact``, ``/api/visibility-check``.
- Deployment/Vercel config.

4) SEO / Metadata / Schema

- Metadata changes
 - ``app/signage/page.js``: no metadata field edits (``title``, ``description``, canonical, openGraph unchanged).
- Schema changes
 - None.
- Canonical/sitemap impacts
 - ``npm run build`` runs ``next-sitemap``, which updates timestamp values in ``public/sitemap-0.xml``.
 - Timestamp churn was reverted to baseline to avoid unrelated noise.
- Intentionally untouched SEO
 - Yes. SEO metadata/schema/canonical behavior intentionally unchanged.

5) Forms / Integrations Safety

- Quote/contact forms changed
 - No (``app/quote-request/QuoteRequestClient.jsx`` unchanged).
- SMTP/Nodemailer/Zoho changed
 - No.
- Deployment/Vercel config changed
 - No.

6) Validation Run

- Commands run
 - ``npm run lint``
 - ``npm run build``
 - ``node --input-type=module ...`` ad-hoc verification scripts for category order, A-Z sorting, product uniqueness/count, search ranking sanity.
 - ``curl -I http://127.0.0.1:3000/signage``
 - ``curl -I http://127.0.0.1:3002/signage``
 - ``lsof -iTCP:<port> -sTCP:LISTEN -P -n``
 - ``git diff --check``
- Pass/fail
 - ``npm run lint``: passed in runs where executed.
 - ``npm run build``: passed in runs where executed.
 - Node verification scripts: succeeded.
 - ``curl`` on ``3000``: timed out (hung dev server).
 - ``curl`` on ``3002``: ``HTTP/1.1 200 OK``.
 - ``git diff --check``: clean in final checks.
- Caveats
 - ``next-sitemap`` mutates ``public/sitemap-0.xml`` timestamps during build; reverted.
 - In-app browser automation had localhost/CDP instability in this environment (``ERR_BLOCKED_BY_CLIENT`` / CDP timeout).

7) Git Status

- Files changed
 - Current working tree at handoff: ``components/signage/SignageHubClient.jsx`` modified.
 - Other signage changes from earlier steps are present in repo history/state: ``app/signage/page.js``, ``lib/signage-data.js``, ``components/signage/SignageCategoryClient.jsx``.
- Files intentionally left unchanged
 - ``app/quote-request/QuoteRequestClient.jsx``

- `app/signage/[category]/page.js`
- `app/api/\*` routes
- Deployment/Vercel config.
- Commit/push/deploy
- Assistant did not commit/push/deploy.
- Repo has recent commits (`a4f0538`, `0492836`) with uncertain authorship from interface context.

8) Open Items / Risks

- Known issues
 - Local dev process on `:3000` can be hung while still listening.
 - Floating FAB overlap can vary by viewport/content length despite improved `bottom-24`.
- Manual verification
 - On `375px` width:
 - top mobile search bar visible before scrolling.
 - FAB appears only after ~2-3 cards in All Products.
 - FAB hidden when bottom sheet open and outside product area.
 - FAB does not occlude `Learn More` / `Request Quote`.
 - result tap closes sheet, scrolls to correct card, and highlight appears.
 - Verify both search entry points return consistent results.
- Follow-up
 - Add Playwright mobile regression for `/signage` search flows.
 - Add unit coverage for `getProductSearchScore`.

9) Copy/Paste Block for Master Memory

[PIXEL_AND_PANEL_MEMORY_BLOCK]

Final decisions:

- `/signage` uses business-priority category order (not alphabetical): banners, yard-real-estate-signs, vehicle-graphics, vinyl-decals-window-graphics, business-storefront-signs, rigid-signs, a-frame-event-displays, print-marketing-materials.
- Product ordering is case-insensitive stable A-Z within categories and all-products displays.
- Mobile keeps two search entry points:
 - 1) top inline search bar near product list start
 - 2) floating amber glass FAB shown only deeper in All Products scroll; opens bottom-sheet search.
- Bottom-sheet results rank by relevance first, then A-Z; selecting result closes sheet, scrolls to card, and briefly highlights card.

Guardrails:

- Do not change product slugs/URLs/names/descriptions/images.
- Do not alter quote/contact form behavior.
- Do not alter SEO metadata/schema unless explicitly requested.
- Do not deploy/push/commit automatically.

Current state snapshot:

- Core UX logic lives in `components/signage/SignageHubClient.jsx`.
- Category order source is `app/signage/page.js`.
- Search synonym coverage lives in `lib/signage-data.js` (`searchKeywords` arrays).
- Category page grid sorting support exists in `components/signage/SignageCategoryClient.jsx`.
- Current unstaged file at handoff: `components/signage/SignageHubClient.jsx`.

Next approved step:

- Manual mobile QA at 375px on `/signage`, then commit only signage-search UX file(s) after confirmation.
